

# ASP.NET Workshop - “Partial Views”

## Learning Outcome

1. To be able to construct a View from other Partial Views

## Exercise 1

1. Recreate the View discussed in 11\_Partial Views.pptx.
2. Create a TransactModel class under the Models folder
  - a. product (of type “string”)
  - b. brand (of type “string”)
  - c. price (of type “float”)
3. Create a ComplainModel class under the Models folder
  - a. product (of type “string”)
  - b. complain (of type “string”)
4. Create a partial view for listing transactions
5. Create a partial view for listing complains
6. Create a partial view for user information
7. Create a partial view for profile picture
8. Create mock data in a controller and action method of your choice (refer to Slide 5)
9. Use a query string to determine if the transact or complain list should be displayed
  - a. localhost:<port>/<controller>/<action>?choice=transact OR
  - b. localhost:<port>/<controller>/<action>?choice=complain
10. Direct your browser to 9a and 9b, verify that the expected partial views are displayed
