

# ASP.NET Workshop - “Conventions”

## Learning Outcome

1. To understand how a Controller can communicate with its Views via ViewData (or ViewBag)

## Exercise 1

1. In the Models folder, create a Data class with 2 member variables
  - a. `public string Greeting { get; set; }`
  - b. `public string From { get; set; }`
2. Instantiate the class in Home controller with these values:
  - a. `Greeting = “Hello there!”`
  - b. `From = “This is Home controller”`
3. Using ViewData, pass the object to About view
4. Display both strings “Greeting” and “From” in the About view
5. Verify that both strings are displayed on the browser
