

Fundamental of Programming with C#

Day 2 Quiz

Write a program to convert length measurement from centimetre to inch. The measurement in inch can be calculated using the following formula:

$$\text{Length in inch} = \frac{\text{Length in cm}}{2.54}$$

Format the result with three digits behind the decimal points (refer to the sample output as reference)

Sample outputs:

```
Please enter the length in cm: 100
39.370
```

```
Please enter the length in cm: 1
0.393
```

Notes:

Please write the program complete with class declarations, main method declarations, namespace and using statements.
