# ASP.NET Workshop - "HTML Helper"

Learning Outcome

1. To understand how to use HTML Helper to create a HTML Form
2. To be able to access the Model using the strongly-typed variant HTML Helper (via Lambda functions)

Exercise 1

1. Create a Registration Form using HTML Helper that looks like this:

2. Create a class (i.e. Model) to represent the Form
3. By referencing the Model in your View (any view of your choosing), create the Form with HTML Helper (using the strongly-typed lambda version)
4. Verify that the Form is correctly by pointing your browser to the appropriate controller for that view
